- This document is a compendium of Pacific Northwest mushrooms arranged by scientific genus/species name. Each entry includes the family name, category name, and if available, the common name(s), and other name(s).
- Where there have been recent name changes, the new name (in some cases only the genus or species part of the name has changed) is listed in red next to their previous genus/species name. A complete entry under that new name is also included in the list.
- The “other names” are helpful when looking up names in older mushroom books.
- To determine the status of the mushroom name shown, refer to the **Genus/species Name Color Key** below. The current name appears in **Black**. A previous name is in **Gray**. A new genus name is in **Red** with the first letter capitalized. A new species name is in **red** and all lowercase.
- Sometimes a mushroom cannot be absolutely identified and the abbreviation for that is “cf” and appears in the part of the name that is in doubt.
